

Quartz Waterfilter

Quartz Waterfilter

Our quartz waterfilter, is a multi-stage cooling water filter with unusually long function duration and large dirt storage.

With back rinses the dirt particle in the four basket in corroding, which are filled with fine quartz granulation, are rinsed out by a particularly developed eddy procedure with small loss of water.

Back rinses without operating interrupt with short back rinsing times!

In the best way suitably in cooling circuits! Also for cooled or tools and machines kept at a moderate temperature very recommendable! Water intake alternatively on the right or on the left and with $\frac{3}{4}$ " or 1" internal thread possible. The quartz water filter is supplied completely finished for the assembly. Flow rate max.5000 l/h.
